Were you able to get the renewal and past due account to print to a letter?
Unfortunately, no.

Which of the other features are not operational?
Here's my list of things I was working on, but have not been able to complete:

- Create a check for Mailing Address = Physical Address & FAIL if Physical Address is null.
- Fix redundant Installation Type submission
- Test Form: Add 1) Supply Pressure at Assembly (required) 2) Discharge Pressure at Assembly (numerical input fields) - BEFORE Assembly Type selection
- Create CSV export of Test Results
- Submission date/time should use local time, rather than server date/time
- Add focus/highlighting for incomplete fields
- "Request More Time" button - Popup form with ACCT# & date -> gives 10 more days
- Ability to attach Water Company to Assembly (for allowing Water Co.s to access + send out renewal / late letters)
- Renewal Notices / Past Due Notices - Email & PRINTING

To finish the needed modules, what exact skills do I need to look for in a programmer?
You need someone who has both PHP skills and who is familiar with [Drupal](). One person I know if is a guy in Conway named Chad Files. If you would like to talk to him, I have included his contact info here:
